

XACT S1 takes digital audio playback to new heights with its naturally sophisticated sound and high-class user experience.

Created by Marcin Ostapowicz, the founder of JCAT and JPLAY brands and author of some of the most innovative high-end audio products, including the world's first audiophile network card.

**NATURAL, ORGANIC,  
SOPHISTICATED SOUND**

**IMMERSIVE, EMOTIONALLY  
RESONATING EXPERIENCE**

**HIGH-CLASS, SEAMLESS  
USER EXPERIENCE**

**DEVELOPED FROM THE GROUND UP  
FOR 6 YEARS**

Digital that doesn't sound like digital. More like vinyl. Or a private concert.

**Any rest of "digital" sound is gone.** (...) Voices have a texture and energy that is incredible. The immediacy of the piano attack is so real as never before. And so on....

**If you have the sound of a nearly perfect vinyl setup as a reference in your ears, you should try the XACT S1.** That is what I can say tell you with a clear conscience.

**Thomas, Austria**

*XACT S1 delivers on my vision of audiophile sound: natural, organic with analog sophistication and lifelike imaging. It's hard to believe it's digital.*

High-class everything.  
Not only the sound.

*Excellent user experience is something that the high-end category essentially lacks. I believe that high-end shouldn't be just about the top sound but the entire listening experience.*

One app to rule them all.  
Effortless management and discovery with JPLAY™ app.

JPLAY™ app brings unrivaled convenience of managing your library and new music discovery.

- Streaming & local files accessible in one place
- Native Tidal & Qobuz discovery features

**TIDAL**

**qobuz**  
REDISCOVER MUSIC

- Extended playlist management
- Advanced search and sort
- Aggregated activity stats
- Multiple library views
- ...and many more!

LIFETIME SUBSCRIPTION INCLUDED

Rediscover the digital music playback with XACT S1.

# XACT

Next-level music server with **analog finesse.**

**WWW.XACT.AUDIO**

**XACT**  
sophisticated realism

A personal dream come true.  
Six years in the making.

The music comes out of a dark invisible background. More dynamic, richer tonality and clean. Bass is deep and articulate. Imaging seem more 3D in space. (...)

The XACT **sounds like analog**, is how I can best describe it, but **without the analogue limitations**.

Celebrat, United States

✂ The creation of XACT S1 stems from my quest to create superbly sounding digital audio transport for myself, which brought me into high-end audio hardware development.

Designed and developed from square one. Fine-tuned by ear. Obsessively.

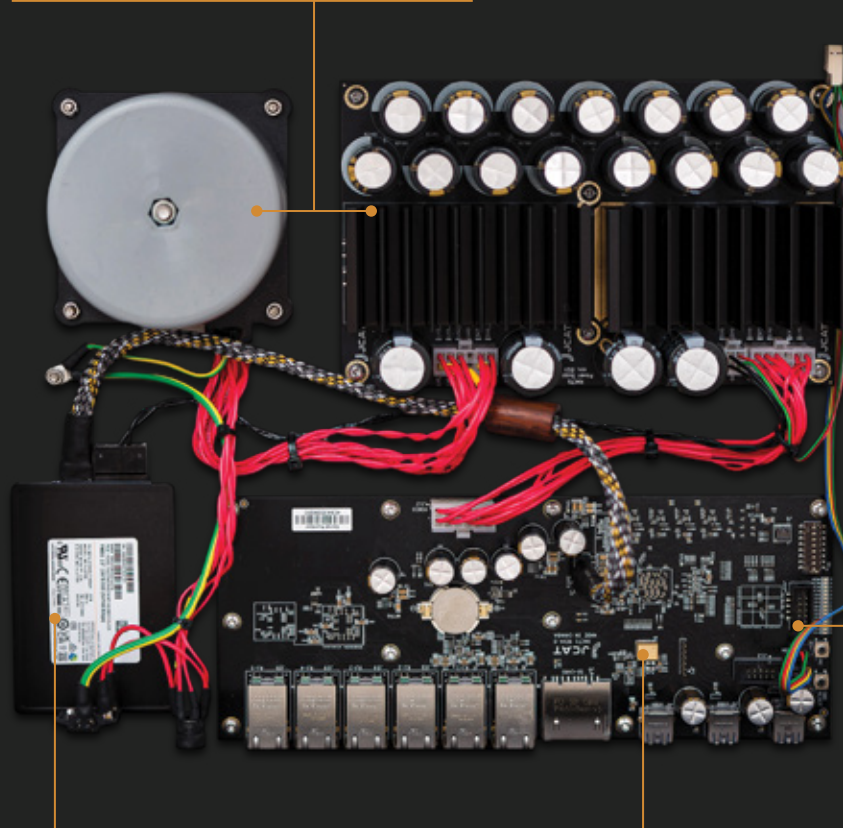

What impressed me the most, compared to the other two streamers, **was the realism of the reproduction**. This mix of richness of timbre and definition, which I had never experienced before, never falls into an analytical effect that quickly becomes tiring.

It was like the XACT S1 created a **emotional human connection between the music and the listener**.

Chupi, France

Only the finest components.  
Obsessive attention to details.

Dedicated OPTIMO™ X1 linear power supply

Specially selected 4TB SSD drive for audio performance

Extremely low-jitter OCXO clock with  $\pm 5$  ppb frequency stability

✂ Most streaming products available today are made with standard, ready-to-use mini-PC motherboards designed for office or home entertainment. However, these motherboards have noisy power converters that interfere with other hi-fi components and produce an irritating "digital" sound. Some companies try to mitigate the issue by upgrading their power supplies, but this doesn't address the root cause. That's why developing an entirely new motherboard from scratch with only audio playback in mind was the only way to go with XACT S1.

It's the first music server that puts so much emphasis on power quality ever. The motherboard itself has only linear regulators and runs solely on linear power. The dedicated power source is 100% linear without any switching components. XACT S1 delivers unmatched electrical performance. There's nothing else like it.

100% custom motherboard developed exclusively for high-end music playback

Every component in XACT S1 is hand-picked or developed from the ground up and thoroughly tested by ear. No other company has gone to such lengths in music server design.

Hardware and software in harmony.  
The definition of synergy.

✂ Over more than 10 years of developing JPLAY, I've learned firsthandedly that the software has as much impact on the sound quality as the hardware platform itself. Through meticulous testing, I've explored all possible optimizations of the operating system and player's code, ultimately identifying the most harmonious combination for the S1's hardware.

1-click setup.  
The simplest.

✂ Simple as it can be.  
Just click the button.
